RESPECT OF THE ENVIRONMENT

SNAP is truly committed to protecting the environment. We do our best to minimize our impact on the planet. This consists in reducing the amount of material used during the manufacture and packaging of the holds. Polyurethane holds and fiberglass volumes are not recyclable for now, but we use the best materials to offer products with the longest possible lifetime. The packaging of the holds is as minimalist as possible and a part of it is recyclable.

We work on using more recyclable and ecological materials to reduce the amount of waste that can be produced by SNAP climbing holds.

MATERIAL

SNAP Holds are made from the best polyurethane on the market : Dannamond. It ensures a better resistance with a grip that will last, while being a lighter material than polyester. Each hold is carefully controlled during all manufacturing stages, from design to production. **SNAP's aim is to offer the best product for climbers.**

FIXATION SYSTEM

SNAP Holds (except small ones) are equipped with a dual fixing system. This system works with a primary cylindrical screw fixing and a secondary wood screw fixing. This system guarantees a stable and resistant fixation in order to avoid the hold to turn. We advise our users to always counter-screw the hold with wood screws. A particular attention has been paid to the position of the wood screws, so that they will not interfere with the grip of the hold.

HOLLOW BACK

For all the holds that are larger than M, we have designed a counter mold to excavate them at the back. As a result, larger holds are lighter and therefore easier to transport. The use of large shapes is facilitated when you create or remove your routes or boulders.

VOLUMES

SNAP Volumes are made of polyester resin and fiberglass, and then covered with quartz sand to obtain a fine and comfortable texture. This material allows very large sharpes to be light, resistant and with very good friction. These volumes are fully fixed with standard wood screws, but we recommend flat head screws to preserve the grip of the hold.

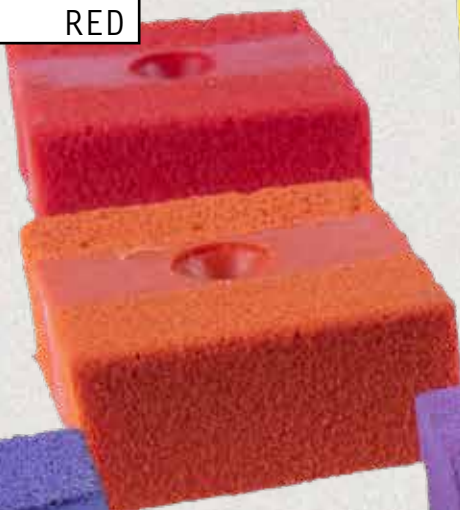

MAINTENANCE

REGULARLY CLEAN THE HOLDS WITH A DRY BRUSH WHEN THEY ARE FIXED ON THE WALL. TO REMOVE THE EXCESS OF MAGNESIA AND RUBBER FROM CLIMBING SHOES.

AFTER THE USE OF HOLDS, CLEAN THE HOLDS WITH A KARCHER IN LUKEWARM WATER WITHOUT DETERGENTS OR ANY CHEMICALS PRODUCTS.
